Overview

The AN/SSQ-62G is a seventh-generation, Directional Command Active Sonobuoy System (DICASS) sonobuoy used for detecting and localizing submarines in preparation for attack. This is the recommended DICASS sonobuoy for customers requiring GPS capability. The DICASS is capable of providing both range and bearing to the target for accurate position fixing.

The AN/SSQ-62G utilizes a standard Lithium Sulphur Dioxide battery pack, and has GPS location reporting capabilities following activation to transmit formatted messages.

The sonobuoy transmits the GPS messages RMC, GSV, GGA, and GSA at an update rate of five seconds on a subcarrier centered at 33.5 KHz. The AN/SSQ-62G is air launchable from fixed or rotary-wing aircraft, or it can be deployed from the deck of a surface vessel. The descent of the sonobuoy is stabilized and slowed by a parachute.
